## POTATOES AND SWEETPOTATOES

Estimates by States and Seasonal Groups--Crops of 1966 and 1967  
Acreage, Yield, Production, Price, Value, Farm Disposition and Stocks

The following tables present estimates for acreage, yield per acre, production, farm disposition, season average price received by growers, and value for the crops of 1966 and 1967. Also included are monthly estimates of total stocks of potatoes in the fall States for the periods of December 1, 1966 to March 1, 1967 and December 1, 1967 to March 1, 1968, inclusive. The estimates shown for farm disposition for the crop of 1966, and season average price, value, and monthly potato stocks for the crop of 1967 are revisions of estimates previously published. Data for Alaska are also included.

The revised estimates are based primarily on additional data obtained from crop reporters and other sources. The check data for 1966 and 1967 crops include annual State Farm Census totals in some States, rail shipments, Federal-State inspections, truck shipments and unloads, processors' records, and information furnished by marketing program officials.

Season average prices in this report are estimated average returns to growers for all uses and all methods of sale. These prices are applied to production having value to compute value of production and to the quantity sold to compute value of sales. The season average price shown for the United States is obtained by weighting State prices by quantities sold. A United States price weighted by production can be derived by dividing the United States value of production by the United States production having value.

The value estimates in this report cover the marketing season and should not be confused with cash receipts from these crops for a calendar year.

### SEASONAL GROUPS FOR POTATOES

The estimates of acreage, yield, production, farm disposition, price and value are shown for each seasonal group. Potato production in each State except Alaska has been classified under the various seasonal groups according to the period or periods when the largest supplies for each group are usually harvested. For Alaska, no season classification is made. Production in 16 States is divided among two or more seasonal groups. The six seasonal groups for potatoes are as follows:

<u>SEASON</u>	<u>USUAL TIME OF HARVEST</u>
Winter .....	January through March
Early spring .....	April through first half of May
Late spring .....	Second half of May and June
Early summer .....	July and first half of August
Late summer .....	Second half of August and September
Fall .....	October through December.

The beginning and end of these seasons are not fixed dates but approximations because there is necessarily some overlapping. Generally, the marketing season follows closely the harvesting season except for the fall crop where marketing from storage extends into the first seven months of the following year.

Table 1.--Potatoes: Acreage, yield and production by seasonal groups, 1966 and 1967 crops
